

Maintain Health Safety and Security at Workplace Class 10 MCQ

Chapter 13: Health, Safety and Security at Workplace

1. **Every workplace illness, accident or dispute is a cost to _.**
 - a. Organization
 - b. Injured individuals
 - c. Injured individuals families
 - d. All of the above

- d. All of the above

2. **Who is responsible for creating a safe workplace in the organization.**
 - a. Employees
 - b. Employers
 - c. Both a) and b)
 - d. All of the above

- c. Both a) and b)

3. **What is the responsibility of the Employee in a workplace regarding the health and safety.**
 - a. Take responsibility for their own health
 - b. Take responsibility for their own safety
 - c. Relying solely on the “Safety Office” or management
 - d. Both a) and b)

- d. Both a) and b)

4. **Which of the following initiatives employers have to take for making a safe and healthy environment in the workplace.**
 - a. Workplaces must be cleaned in the morning and clean washroom facility
 - b. Proper clean and cool air at workplace is mandatory
 - c. Proper filtered water facility must be available
 - d. All of the above

- d. All of the above

5. **Which of the following practices should be used in the workplace to free from hazards and risk.**
 - a. Proper safety guidelines must be prepared by the employer
 - b. Employee should be strictly followed the guideline
 - c. The safety procedures must be practiced by employees.
 - d. All of the above

- d. All of the above

6. **Every organization has a separate security department, this department is responsible for various security such as _.**
 - a. Personal Safety
 - b. Computer System Safety
 - c. Electrical Safety and Transport Safety
 - d. All of the above

- d. All of the above

7. Which of the following hazards occur in the IT sector?

- a. Biological
- b. Chemical
- c. Physical
- d. Ergonomic

d. Ergonomic

8. Which strategy promotes a safe and healthy work environment?

- a. Keeping emergency exits clear
- b. Leaving cables loose on the floor
- c. Ignoring safety warnings
- d. Using unapproved software

a. Keeping emergency exits clear

9. Radiations and Vibration comes under which hazard.

- a. Physical Hazard
- b. Chemical Hazard
- c. Electrical hazard
- d. Ergonomic Hazard

a. Physical Hazard

10. Which of the following belong to biological hazard.

- a. Blood and Body fluids
- b. Mold and Fungi
- c. Virus
- d. All of the above

d. All of the above

11. Which of the following health hazards in the workplace have the potential to harm employee health.

- a. Viruses in the workplace, such as flu or common colds
- b. Noisy machine could damage the sense of hearing of the workers
- c. Bright lights and toxic fumes and vapor could damage the eyes and nose.
- d. All of the above

d. All of the above

12. A health, safety and security policy is a statement written by an employer for the protection of __.

- a. Employees
- b. To the public
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

13. The government has a specific section mentioned in their company laws regarding healthy, safety and security policy, which state that __.

- a. The employer or company should follow the government health, safety and security policy
- b. Company or employer should have their own health, safety and security policy for the employee
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

14. What are the reasons for Health, Safety and Security policies in the workplace.

- a. It shows the company commitment for their employees regarding health and safety
- b. The company is not only making profits but company is taking care of the stakeholders
- c. Injuries and illness of the employees is prevented through such policy
- d. All of the above

d. All of the above

15. What is the purpose of Occupational Health and Safety (OH&S) policy of the government of India.

- a. Preventing workplace accidents and injuries
- b. Promoting employee health and well being
- c. Ensuring compliance with laws and regulations
- d. All of the above

d. All of the above

16. OH&S government of India focus on which of the following measures in an IT company.

- a. Boosting profits
- b. Preventing accidents
- c. Enhancing social activities
- d. All of the above

b. Preventing accidents

17. OH&S objectives and targets are reviewed _.

- a. Annually
- b. Periodically
- c. Both a) and b)
- d. None of the above

b. Periodically

18. What is the most common definition of hazard _.

- a. a danger or risk
- b. anything that cause injury, illness or damage to people
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

19. What do you mean by Physical Hazard in the workplace?

- a. Slippery floors
- b. Extreme temperature
- c. Excessive noise or working with machines
- d. All of the above

d. All of the above

20. How you will avoid falls and slips in the workplace.

- a. Arrange all the things properly
- b. Keep floors clean and dry
- c. Install proper lights
- d. All of the above

d. All of the above

21. What are the common types of electrical Hazards.

- a. Faulty equipment can cause shock
- b. Overloaded circuits or overheating equipment can lead fires
- c. Sparks from electrical equipment
- d. All of the above

d. All of the above

22. What are the common causes of electrical accidents?

- a. Overloading of electrical outlets
- b. Ungrounded or faulty equipment
- c. Unsafe use of electrical equipment
- d. All of the above

d. All of the above

23. How the employer will avoid electrical hazards from the workplace.

- a. Provide instruction about electrical safety
- b. Keeping water and food away from electrical equipment
- c. Using routine inspections
- d. All of the above

d. All of the above

24. Which of the following systems should be placed in an organization for fire safety.

- a. Emergency mitigation systems
- b. Fire escape routes
- c. Fire extinguishers and alarms
- d. All of the above

d. All of the above

25. Bright light sources behind the screen make it difficult to see your work, which of the following possible solutions to avoid this.

- a. Use drapes on windows
- b. Use indirect or shielded lighting where possible
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

26. Hazards while using computers include __.

- a. Poor sitting posture
- b. Excessive duration of sitting in one place
- c. Glare from the computer screen
- d. All of the above

d. All of the above

27. Moving or lifting large objects without following the right protocols can result in __.

- a. Potential hazard
- b. Chemical hazard
- c. Biological hazard
- d. Ergonomic hazard

a. Potential hazard

28. **Potential hazards may include ____.**

- a. Poor ventilation and housekeeping
- b. Chairs and tables of inappropriate height
- c. Staff unaware of emergency procedures
- d. All of the above

d. All of the above

29. **Which of the following safety guidelines checklist in the workplace.**

- a. Store all cleaning chemicals in tightly closed containers in separate cupboards
- b. Throw garbage daily
- c. Make sure all areas have proper lighting
- d. All of the above

d. All of the above

Chapter 14: Workplace Quality Measures

30. **Air and water pollution can be analyzed by using which of the following methods.**

- a. Physical method
- b. Chemical method
- c. Biological method
- d. All of the above

d. All of the above

31. **The PH value of the water can be measured through ____.**

- a. Physical method
- b. Chemical method
- c. Biological method
- d. All of the above

b. Chemical method

32. **Which of the following indicators are used to monitor the health of the ecosystem.**

- a. Microbial indicator
- b. Redox indicator
- c. Both a) and b)
- d. None of the above

a. Microbial indicator

33. **Which of the following guidelines to follow by organization to keep the surrounding air and water clean.**

- a. Avoid dust production, generation of solid particles and gasses in the air
- b. Organization must use limited number of vehicles to avoid air pollution
- c. Organization must take care that their waste water is not mixed with surrounding water
- d. All of the above

d. All of the above

34. **What is the importance of cleanliness at the workplace.**

- a. Clean workplace avoid the hazardous
- b. Clean workplace makes your job easier and more pleasant
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

35. _ is a science concerned with designing and organizing objects to ensure that humans can use them safely and efficiently.

- a. Ergonomics
- b. Human Factors Psychology
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

36. Which of the following ergonomics can be used for identification of early warning signs.

- a. Sore lower back or Burning in the upper back
- b. Stiff neck or sore shoulders
- c. Dry eyes or Eye strain and sore eyes
- d. All of the above

d. All of the above

37. What precautions should a person take if they suffer from dry eyes?

- a. Rest eyes periodically
- b. Do simple eye exercise
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

38. What precautions does a person need to take if they have lower back pain?

- a. Use backrest of chair
- b. Put small pillow or lumbar support on backrest of chair
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

39. What safety measures must an office worker take if they have musculoskeletal issues and he/she wants to avoid the problem?

- a. Keep your monitor distance 20 to 30 inch away from you
- b. Adjust height of armrest so that your elbows are at a 100-110 degrees open angle
- c. Always take small breaks while working on the computer
- d. All of the above

d. All of the above

40. __ is also known as repetition strain injury (RSI), refers to a group of disorders that can cause discomfort or persistent pain in the tendons, muscles, and other soft tissues, either with or without physical symptoms.

- a. Occupational overuse syndrome
- b. Angelman syndrome
- c. Turner syndrome
- d. None of the above

a. Occupational overuse syndrome

41. How to avoid Occupational overuse syndrome disorder.

- a. Use appropriate posture

- b. Keyboard and mouse should be kept at same level
- c. Avoid gripping the mouse too tightly.
- d. All of the above

d. All of the above

42. Many times we are working on a computer for a long time, which may cause strain in leg and feet, how can we avoid this.

- a. Use footrest for more support
- b. There should be enough space for stretch your legs
- c. Sit comfortably and keep you feet flat on the floor
- d. All of the above

d. All of the above

43. Computer Vision Syndrome is caused by _.

- a. Bright light
- b. Glare and flickering images
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

44. How you will reduce the risks of visual problems.

- a. Adjust the brightness of computer
- b. Reposition the screen to avoid glare from lights
- c. Keep a proper vision distance from computer
- d. All of the above

d. All of the above

45. To reduce the risk of visual problems, keep your computer monitor distance between _ away from your face.

- a. 70 to 80 inches
- b. 120 to 140 inches
- c. 50 to 70 inches
- d. 18 to 24 inches

d. 18 to 24 inches

46. Headaches may occur due to __.

- a. Muscle tension
- b. Pain in the neck
- c. Strain on the eyes or vision problem
- d. All of the above

d. All of the above

47. How do you handle if you are feeling emotional or physical tension (Stress).

- a. Yoga
- b. Natural remedies
- c. Medications as prescribed by a medical provider
- d. All of the above

d. All of the above

48. There is really no right or wrong way to use a laptop because the keyboard and screen are so near to one another. If you put the screen at the ideal height for your neck and back you will have to raise your arms and shoulders too high to operate the laptop and vice versa. How you will overcome this problem.

- a. You will use external keyboard and mouse along with laptop stand for long time
- b. You may use desktop that is set up ergonomically correct for long time
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

49. Which of the following is a safe method for using a computer monitor.

- a. Use LED monitor with legible size and with
- b. Adequate space between the characters and lines
- c. Screen should be stable and no flickering
- d. All of the above

d. All of the above

50. Which of the following cautions you have to take while working on the computer.

- a. Use surge protector when you plug your system in
- b. Battery backup system is the best way to protect against a power outage.
- c. Remove rings, watches and necklaces while working on the computer
- d. All of the above

d. All of the above

Chapter 15: Prevent Accidents and Emergencies

51. What is an accident?

- a. Planned event that causes harm
- b. Event in the workplace
- c. Situation where needs immediate action
- d. Unforeseen, unmanaged, or unplanned incident that causes damage or injury

d. Unforeseen, unmanaged, or unplanned incident that causes damage or injury

52. _ is an extremely serious or urgent circumstance that requires urgent attention and action.

- a. Emergency
- b. Non-Urgent
- c. Both a) and b)
- d. None of the above

a. Emergency

53. Which of the following is an example of an emergency.

- a. An unexpected situation that calls for immediate action
- b. A fire break out in an organization
- c. Both a) and b)
- d. None of the above

c. Both a) and b)

54. Which of the following is the most suitable way for handling accidents and emergencies in a workplace.

- a. Follow the organization guideline and policies of accident and emergency.
- b. Ignore the accident if it is minor

- c. Try to resolve the problem without following organization guidelines.
- d. All of the above

a. Follow the organization guideline and policies of accident and emergency.

55. Which of the following are common types of accidents in organizations.

- a. Trip and Fall
- b. Slip and Fall
- c. Accidents due to Moving Objects
- d. All of the above

d. All of the above

56. Which of the following is the most suitable situation for handling accidents in an organization.

- a. Attend to the Injured Person Immediately
- b. Inform your Supervisor
- c. Assist your Supervisor
- d. All of the above

d. All of the above

57. Which of the following general emergency handling procedures you have to follow.

- a. First Aid
- b. Electrical Safety
- c. Evacuation
- d. All of the above

d. All of the above

58. Which of the following general evacuation policies you have to follow in an emergency.

- a. Immediately moving towards the nearest emergency exit
- b. Guide the people to the emergency exits
- c. Assist the person with disability to move towards the emergency exit
- d. All of the above

d. All of the above

59. Which of the following are the main types of hazards in a workplace.

- a. Electrical hazards
- b. Combustible materials
- c. Flammable materials
- d. All of the above

d. All of the above

60. Which of the following fire prevention methods we have to follow in a workplace.

- a. All employees must know where the fire extinguishers are located
- b. Fire extinguishers and First Aid station should be clearly marked with sign
- c. Never block access to Exits, fire extinguishers, electric switches and panels
- d. All of the above

d. All of the above

61. Which of the following are Class A materials that generate heat.

- a. Wood, cloth and paper
- b. Liquid, grease and gas

- c. Electrical materials and equipment
- d. Magnesium, potassium and sodium

a. Wood, cloth and paper

62. Which of the following are Class B materials that generate heat.

- a. Wood, cloth and paper
- b. Liquid, grease and gas
- c. Electrical materials and equipment
- d. Magnesium, potassium and sodium

b. Liquid, grease and gas

63. Which of the following are Class C materials that generate heat.

- a. Wood, cloth and paper
- b. Liquid, grease and gas
- c. Electrical materials and equipment
- d. Magnesium, potassium and sodium

c. Electrical materials and equipment

64. Which of the following are Class D materials that generate heat.

- a. Wood, cloth and paper
- b. Liquid, grease and gas
- c. Electrical materials and equipment
- d. Magnesium, potassium and sodium

d. Magnesium, potassium and sodium

65. Which of the following fire extinguishers is suitable for wood, cloth and paper.

- a. Water CO2
- b. Mechanical foam
- c. ABC dry powder
- d. All of the above

d. All of the above

66. Which of the following fire extinguishers is suitable for liquid, grease and gas.

- a. Dry chemical powder
- b. Carbon dioxide or Mechanical foam
- c. ABC dry powder
- d. All of the above

d. All of the above

67. Which of the following fire extinguishers is suitable for electrical materials and equipment.

- a. Dry chemical powder
- b. Carbon dioxide
- c. ABC dry powder
- d. All of the above

d. All of the above

68. Which of the following fire extinguishers is suitable for magnesium, potassium and sodium.

- a. Dry chemical powder
- b. ABC dry powder

- c. Water CO2
- d. Both a) and b)

d. Both a) and b)

69. Which of the following rescue techniques are used in an accident.

- a. Never rush into an accident situation
- b. Call 108 as soon as possible
- c. Approach the accident place cautiously
- d. All of the above

d. All of the above

70. What is one way to mitigate hazards associated with prolonged computer use?

- a. Increasing screen brightness
- b. Stretching at regular intervals or doing simple yoga
- c. Using a smaller screen
- d. Sitting in a fixed position

b. Stretching at regular intervals or doing simple yoga

Unit 4: Maintain a Healthy, Safe, and Secure Working Environment

Chapter 13. Health, Safety, and Security in the Workplace

1. Why health, safety, and security are important in the workplace.

Answer – In a workplace accident, illness, or dispute, there is a cost to the organization, as well as a cost to injured individuals and their families. It is our responsibility to create a safe workplace. This will improve the work environment and the productivity.

2. What is health, safety, and security policy?

Answer – A health, safety, and security policy is a written statement by an employer stating the company's commitment to the protection of the health, safety, and security of employees and the public.

3. What are the policies of health, safety, and security in the workplace?

Answer – There are several reasons that can be specified for safety policy as given below.

- It indicates the company's commitment to their employee health and safety.
- It shows the performance of the business and the safety performance are compatible with each other.
- It states that the company is not only making profits but it is taking care of employees also.
- The accountability of everyone working for the company is outlined for the workplace health, safety, and security.
- Company can comply with national policy on Occupational Health and Safety (OH&S) of the Government of India.
- Injuries and illness of the employees are prevented through such policy.

4. What do you mean by hazards?

Answer – The most common definition of a hazard is 'a danger or risk in any place.

5. What are workplace safety hazards?

Answer – Workplace hazards pose potential harm to people at work, and that can cause damage to the work environment. Hazards may result in poor health as well as losses for organizations in terms of property and equipment.

6. What do you mean by physical hazards?

Answer – It is the risks arising from the physical work environment, including floors, walls, and ceilings, working with electrically powered equipment or machinery.

7. What are the different physical hazards present in the workplace?

Answer – The different physical hazards present in the workplace are –

- Falling Off Heights, Slipping and Tripping
- Electrical Hazards
- Fire Hazards
- Health Hazards
-

8. What are the potential sources of hazards in an organization?

Answer – Bright light sources behind the display screen can create contrast problems, making it difficult to clearly see your work. Apply the following possible solutions to avoid this.

- Use blinds or drapes on windows to eliminate bright light.
- Use indirect or shielded lighting where possible and avoid intense or uneven lighting in your field of vision.
- Reorient the workstation so bright lights from open windows are at right angles with the computer screen.
- High contrast between light and dark areas of the computer screen, the horizontal work surface, and the surrounding areas can cause eye fatigue and headaches.

9. What are the safety guidelines/checklist in any organization?

Answer – The safety guidelines checklist in any organization is –

- Store all cleaning chemicals in tightly closed containers in separate cupboards.
- Throw garbage daily.
- Make sure all areas have proper lighting.
- Do not wear loose clothing or jewelry when working with machines.
- Never distract the attention of people who are working near a fire or with some machinery, tools, or equipment.
- Where required, wear protective items, such as goggles, safety glasses, masks, gloves, and hair nets.
- Shut down all machines before leaving for the workplace.
- Do not play with electrical controls or switches.

10. What are the different ways to analyse water pollution?

Answer – Air and water pollution can be analysed by using three different methods. There are three common forms of analysis: physical, chemical, and biological.

11. What are the guidelines for clean air and clean water in any organisation?

Answer – The guidelines of clean air and clean water in any organisation are

- Avoid dust production and the generation of solid particles and gases in the air.
- Organisations must use a limited number of vehicles to avoid air pollution.
- The generation of ozone gas must be kept at a low level by the organisation.
- Organisations have to take care that their wastewater is not mixed with the surrounding water.
- Extensive use of fertilisers and pesticides must be avoided as it can make the groundwater polluted.

12. What is ergonomics science?

Answer – Ergonomics is the science concerned with designing and arranging things so that people can use them easily and safely. Applying ergonomics can reduce the potential for accidents and injury to improve performance and productivity.

13. In the office, what types of ergonomics do we have to use?

Answer – In the office work, following ergonomics we have to follow –

- Use the backrest of the chair; put a small pillow or lumbar support on the backrest of the chair.
- Put the document holder or prop it up so you can see without leaning forward.
- Move or raise the monitor to the centre of the desk and check if the headset is available.
- Move closer to the keyboard. Bring mouse down to level of keyboard.
- Add a wrist rest to the front of the keyboard and mouse pad rest.
- Rest your eyes periodically and do simple eye exercises.
- Reorient your desk and computer so light is not directly behind or in front of you.

14. What is a musculoskeletal disorder?

Answer – This problem includes different areas of your body, such as neck, back, chest, arms, shoulders, and feet. It occurs because of your wrong posture and uncomfortable chair for sitting that is not ergonomically correct while working on the computer.

15. What do you mean by occupational overuse syndrome?

Answer – Occupational overuse syndrome, also known as repetition strain injury (RSI), is a collective term for a range of conditions characterised by discomfort or persistent pain in muscles, tendons, and other soft tissues, with or without physical manifestations.

16. How to reduce the risks of visual problems?

Answer – To reduce the risks of visual problems are –

- Adjust the brightness of your computer screen to save your eyes from strain.
- Reposition the screen to avoid glare from lights or windows.
- Keep a proper vision distance from the computer screen and blink your eyes in an interval.
- Wear anti-glare glasses while working on the computer.
- Keep the screen clean and use a desk lamp to make it easier to see.
- Ensure the screen colours are easy to look at and that the characters are sharp and legible.

17. What is an accident?

Answer – An accident is an unplanned, uncontrolled, or unforeseen event resulting in injury or harm to people and damages to goods. For example, a person falling down and getting injured or a glassware item that broke upon being knocked over.

18. What is an emergency?

Answer – An emergency is a serious or crisis situation that needs immediate attention and action. For example, a customer having a heart attack or a sudden outbreak of fire in your organisation needs immediate attention.

19. What are the different types of accidents in any organisation?

Answer – The following are some of the commonly occurring accidents in organisations:

- Trip and Fall
- Slip and Fall
- Injuries caused by escalators or elevators (or lifts)
- Accidents due to Falling of Goods
- Accidents due to Moving Objects

20. Who to handle accidents?

Answer – In case of an injury to a colleague due to an accident, do the following.

- Attend to the Injured Person Immediately
- Inform your supervisor.
- Assist your Supervisor

21. What are the general evacuation procedures?

Answer – Each organisation has its own evacuation procedures as listed in its policies. You should be aware of these procedures and follow them.

- Leave the premises immediately and start moving towards the nearest emergency exit.
- Guide your customers to the emergency exits.
- If possible, assist the person with a disability to move towards the emergency exit.
- Do not use the escalators or elevators (lifts) to avoid overcrowding.
- Go to the emergency assembly area.

22. What is a fire extinguisher? What are the different types?

Answer – A fire extinguisher is a protection device used to extinguish fires. It is a cylindrical pressure vessel containing an agent that can be discharged to extinguish a fire. There are four different types of fire extinguisher.

- Class A Material: materials such as wood, cloth, and paper, which won't ignite on their own but will continue to burn once exposed to a heat source.
- Class B Material: all liquid, grease, and gas materials that burn when exposed to ignition sources.
- Class C Material: electrical materials and equipment. These materials cause fires very quickly and present a serious risk of arc flash.
- Class D Material: any materials that are volatile and able to quickly ignite, such as magnesium, potassium, and sodium.

23. What is CPR?

Answer – A victim may require cardiopulmonary resuscitation (CPR). CPR can save a life during cardiac arrest, when the heart stops beating.

Necessary steps you have to take if any emergency is there:

- If the victim is breathing and has a heartbeat, give first aid for injuries and treat for shock.
- Ensure the victim gets medical care as soon as possible.
- The physician attending the victim must have detailed information to properly diagnose and care for the victim.
